How many solar panels does a 1500 watt solar panel need?

To run a 1500 watt heater,you would need at least 5 x 300W solar panels. Assuming each PV module can produce 300 watts an hour,five of these would be good for 1500 watts. However,there are several factors that can affect solar panel production,making it difficult for a solar panel to generate 300 watts an hour.

What is a 1500 volt Solar System?
