

Design standards for energy storage power supplies

What is the energy storage system guide?

Through their efforts, the Energy Storage System Guide for Compliance with Safety Codes and Standards 2016 was developed. This code for residential buildings creates minimum regulations for one- and two-family dwellings of three stories or less.

What do electrical engineers learn while designing battery energy storage systems?

Electrical engineers must learn to navigate industry codes and standards while designing battery energy storage systems (BESS). Understand the key differences and applications battery energy storage system (BESS) in buildings. Learn to navigate industry codes and standards for BESS design.

What are the NFPA requirements for emergency and standby power systems?

International Building Code (IBC): Following IBC 2024 Chapter 27 Section 2702.1.3, emergency or standby power systems must be installed following the guidelines outlined in the International Fire Code (IFC), NFPA 70: National Electrical Code (NEC) and NFPA 111: Standard on Stored Electrical Energy Emergency and Standby Power Systems.

Does industry need standards for energy storage?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

What is a battery energy storage system (BESS) & an uninterruptible power supply (UPS)?

Figure 1: A simplified project single line showing both a battery energy storage system (BESS) and an uninterruptible power supply (UPS). The UPS only feeds critical loads, never losing power.

What is a safe energy storage system (ESS)?

Timely deployment of a safe ESS is the way to document and validate compliance with current Codes, Standards, and Regulations (CSR). A task force under the CSR working group was formed to address compliance with current CSR. Through their efforts, the Energy Storage System Guide for Compliance with Safety Codes and Standards 2016 was developed.
