

Imagine bridge piers that store solar energy or highway sound barriers doubling as wind turbines. Projects like Singapore's Tuas Mega Port are already piloting these structural energy storage ...

At Tesla, our design work doesn't only exist on a computer screen and we don't waste time on products that we don't see a future in. Your designs will come to life and exist in the real world ...

Abstract- Implementation of a tri-objective optimal design of an off-grid renewable energy system for a residential building is evaluated in this study. The considered system is consisting of split ...

At the heart of civil engineering lies the integration of various energy systems, one of which is dump energy. This concept refers to the surplus energy generated during the ...

It is now becoming obvious within the industry that we should do something other than simply dissipate energy into the surrounding environment. For the wind-diesel system, we ...

Given the proliferation of electronic systems in modern vehicles and virtually every other aspect of life, electronic engineers must design with sustainability in mind. Fortunately, ...
