

# Georgia portable mobile power customization

What is a portable power unit?

Our portable power units offer long lifespans, compact and lightweight constructions, a fully sealed enclosure, and many other features. Typically, we use single-phase power transformers within mobile power systems. If you require a different design method, our team is prepared to work with you to meet your specifications.

Why should you choose GTC for your portable power unit?

Environmental Conditions. Your job site's location, temperature, and weather can affect your portable power unit's size, enclosure, and more. We will meet the demands posed by any location. For instance, GTC compensates for high outdoor temperatures by designing slightly larger transformers to offset the heat.

What distinguishes a portable power unit from a stationary transformer?

Several design considerations differentiate portable power units from stationary transformers. These considerations include: Heat. As portable power systems are fully enclosed to provide protection from outdoor environments, heat can become trapped within the system box.

What factors affect a portable power unit's size & enclosure?

Your job site's location, temperature, and weather can affect your portable power unit's size, enclosure, and more. We will meet the demands posed by any location. For instance, GTC compensates for high outdoor temperatures by designing slightly larger transformers to offset the heat. Connections.
