

How much does a Russian outdoor power supply cost

How much does electricity cost in Russia?

Electricity costs in Russia are significantly lower than elsewhere in Europe. For example, in 2022, you're likely to pay a maximum of 7.10 RUB per kilowatt-hour in Moscow. However, the price fluctuates according to peak times and the type of home.

How do utilities work in Russia?

The nature of the utilities sector in Russia means you generally have no choice when it comes to suppliers. For example, electricity suppliers have a semi-monopoly in each region. Gazprom is the leading gas supplier, and regional companies maintain the water supply. You'll usually find that your utility provider depends on where you live.

How much does gas cost in Russia?

Gas and oil prices in Russia are heavily regulated, so you can't say how much really you pay for them because you pay only a small part directly. 6 for day, 3 for night - in rub/kWh - that's what we have here, in Saint-Petersburg. That would be roughly 0.10\$ and 0.05\$ for one kW*h if we consider a dollar equal to 60 rubbles.

What voltage does Russia use?

Russia uses a 220V supply voltage and 50Hz. Luckily for those moving from elsewhere in continental Europe, Russia uses the same plug sockets: type C and F. Bear in mind that if you're moving from the US, you'll need an adapter with a voltage converter - using the incorrect voltage can be extremely dangerous.

How do electricity bills work in Russia?

In Russia, you pay your electricity bills according to meter readings. The cost for installing and maintaining electricity meters is the responsibility of energy companies, and the data is transmitted automatically to the supplier. Electricity costs in Russia are significantly lower than elsewhere in Europe.

Who supplies gas in Russia?

Russia's largest gas supplier is Gazprom. It's the homeowner's responsibility to make sure the home is connected to the gas supply - you can find out how to do this on the website of the Unified Gasification Operator of the Russian Federation. The gas supply itself is maintained and operated at the administrative regional level.
