How much does it cost to build a wind turbine?

Wind The average construction cost for U.S. onshore wind turbines increased 1.6% in 2022 to \$1,451/kW. Higher costs were driven by increases in construction costs for wind farms greater than 100 megawatts (MW) in nameplate capacity. The cost for wind farms between 100 MW and 200 MW of capacity increased by 10% to \$1,614/kW.

What are the integration costs of a wind or solar plant?

Integration costs may be incurred by the wind or solar plant, but are often borne by existing generators or elsewhere in the system. While dispatchable plants also impose integration costs, the integration costs of intermittent plants become significantly larger with increasing intermittent generation on the grid.

What are the costs of a wind project?

Wind projects' costs include expenses other than turbines, like wind resource assessment and site analysis; construction; permitting and interconnection studies; utility system upgradation, transformers, protection and metering of the equipment; insurance; operations, warranty, maintenance, and repair; and legal and consultation fees.

How much does a 10 kW wind turbine cost?

At the residential scale, small rooftop or yard-mounted 10 kW home wind turbines designed to supplement a portion of household electricity needs often fall in the range of \$50,000 to \$80,000 (?2.6 years of career dedication at a \$15/hour wage) including professional installation.

How much does an onshore wind project cost?

After factoring in construction costs for foundations, access roads, cabling, grid connections, permitting, and installation labor, the total installed cost per megawatt rises to between \$3 million and \$4 million (?128.2 years of non-stop labor earning \$15/hour) for a completed utility-scale onshore wind project.

How much does an offshore wind turbine cost?

Large offshore turbines can cost tens of millions of dollars, with the most powerful 12 MW turbines reaching up to \$400 million (?12820.5 years of non-stop work at \$15/hour - exceeding the time since the end of the last Ice Age) for manufacturing and installation.
