

Is it better to have a higher wattage solar panel

Are solar panels better?

Solar companies love to tout their superior equipment. It's one of the primary sales tactics used by the door-knocker mafia. Some sales reps will try to convince you that their panels are better because they have a higher wattage rating. However, bigger numbers don't always mean higher quality, and that holds true in the world of panel wattage.

Is a fewer wattage solar panel a good idea?

The **ONLY** benefit is that there is 1 fewer panel. This should only be considered when space is extremely limited and when you are **REQUIRED** to hit a certain kW size that panels with lower wattage can't hit. Doubling the cost lowers your ROI and increases your time to pay off.

Do solar panels produce more energy than you need?

The efficiency of your solar panel will determine how much sunlight can be converted into electricity. Most times solar panels will produce the exact energy required to power your household with no excess energy left over. However, there are times when your solar system will end up generating more energy than you require.

How fast is solar wattage compared to price per watt?

Not so fast. An important metric in solar is price per watt (PPW). Price Per watt is simply the cost of the panel divided by the wattage. This metric is far superior to just analyzing the panel wattage because it factors in price. You use this metric when comparing panels for purchase.

Are high voltage solar panels better?

High voltage panels tend to perform better in partially shaded conditions, as they have improved bypass capabilities. If shading is a concern, high voltage systems may offer better energy production in challenging environments. [Can You Live Off-The-Grid With Low Voltage Solar Panels?](#)

Why do solar panels have a higher voltage?

The higher voltage of course means more power in one go, which could mean you can run a larger load at the same time. If you are going to be building your own system or have some advanced knowledge of solar panels, then you will want to look for higher voltage as it allows more power output per panel and means fewer panels needed in total.
