

Mobile Energy Storage System Standards

Are energy storage systems compliant?

Energy storage systems continue to be a rapidly evolving industry. Thus, the key to safe and up-to-date compliance requirements involves the adoption and application of codes and standards in addition to the development or writing of codes and standards.

How far can a mobile energy storage system be deployed?

Additional limitations for where a mobile energy storage system can be deployed include a 10 ft (3 m) limitation on how close it can be to various exposures and a 50 ft (15.3 m) limitation on how close it can be to specific structures with an occupant load of 30 or greater.

What is mobile energy storage system?

The primary application of mobile energy storage systems is for replacement of polluting and noisy emergency diesel generators that are widely used in various utilities, mining, and construction industry. Mobile ESS can reduce use of diesel generators and provide a cleaner and sustainable alternative for reduction of GHG emissions.

How are energy storage systems regulated?

In some contexts, for energy storage systems, compliance regulations take the form of a state adopting a code, which then references and requires testing and listing or adherence to a standard. Some cities, counties, and special administrative districts (e.g., school or sewer districts) also adopt locally amended codes for their environments.

How far away should a mobile energy storage system be parked?

However, when the mobile energy storage system needs to be parked for more than an hour, it needs to be parked more than 100 ft (30.5 m) away from any occupied building, unless the authority having jurisdiction (AHJ) approves an alternative in advance. Deployment documents

Are mobile energy storage systems ambiguous?

There is also ambiguity in available technologies and vendor products that can be reliably used in mobile energy storage applications. In that regard, the design, engineering and specifications of mobile and transportable energy storage systems (ESS) projects will need to be investigated.
