

Outdoor power supply with a price of \$1 000 per kilowatt-hour

How much does 1 kWh cost?

As you can see from the chart, 1 kWh can cost anywhere from \$0.10 to \$0.30 (in some states, you may pay even less than \$0.10, and in California, the electricity prices per kWh can cross \$0.30/kWh). With the kilowatt-hour calculator and this chart, you can simply figure out how much will any amount of electricity (kWh) cost.

How do you calculate cost per kWh?

Suppose a household receives an electricity bill of \$120 and has used 750 kWh in a month. The cost per kWh can be calculated as follows: This means that for every kilowatt-hour of electricity consumed, the user is paying \$0.16. **How Can I Reduce My Cost Per kWh?**

How much electricity does a 1000 watt heater use?

A 1000 watt heater running 8 hours per day for 30 days will use 240 kWh of electricity. At the US average electricity rate of \$0.15/kWh, that translates to \$36 per month. Calculating your electricity bill from spent kWh is fairly easy. All you need to do is to multiply the used kWh by the price of electricity (per kWh).

How do you calculate electricity costs?

This table is useful for estimating electricity costs and comparing rates between different providers. Suppose a household receives an electricity bill of \$120 and has used 750 kWh in a month. The cost per kWh can be calculated as follows: This means that for every kilowatt-hour of electricity consumed, the user is paying \$0.16.

How much electricity does a computer use a day?

If your electric rate is 11 cents per kWh, it would cost you .1023 cents per day to play video games. Using your video game system would account for about \$3.07 of your monthly electricity bill. **Laptop:** A 17-inch laptop runs about 90 watts. If you're working from home and use it for 9 hours a day, it would consume 810 watt-hours per day.
