

Are photovoltaic modules going up in Europe?

In Europe, the price increase for photovoltaic modules is not quite as strong as expected, at least until now. In particular, thin film module prices remained relatively stable, with March showing barely any movement.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.

Will a photovoltaic module price increase by 10 cent/WP?

Recent investigations have confirmed the end of photovoltaic module price declines. This would lead to a price increase for end products 'Made in Europe' by at least 10 Cent/Wp. Read the full entry in the April edition of pv magazine, due out on April 4.

Is Italy ready for a 500 MW photovoltaic power plant?

Italy will hold its first call for tenders at the end of September for a photovoltaic capacity of some 500 MW. Three more tenders are planned for 2020, but the total volume seems almost laughable next to the scale of the Asian market.

Are photovoltaic module prices stagnating?

While module prices for non-EU projects are in the lower 40 eurocent range, prices within the European Union are stagnating just above the 50 eurocent mark.

What's going on with the European photovoltaics market?

The European photovoltaics market continues its downward trend in module prices. Despite new concepts making inroads, demand has slowed, keeping prices under pressure. Nearly every product has fallen by a couple of percentage points compared to last month's prices.
