Are lithium-ion batteries safe?

Homeowners increasingly adopt lithium-ion batteries for solar energy storage, backup power, and energy efficiency. These systems, when installed according to NFPA 855, minimize risks such as fire or thermal runaway. Proper ventilation, fire safety measures, and adherence to spacing requirements ensure safe operation.

Can a lithium-ion battery cabinet withstand a fire?

You should ensure all storage cabinets for lithium-ion batteries are rated for fires starting from inside the cabinet. Without this, the protection is inadequate. The cabinet must withstand an internal fire for at least 90 minutes; it must be tested and approved to UL-955 for internal fire. 2. Ensure that your cabinet has integral ventilation

What are the OSHA standards for lithium-ion batteries?

While there is not a specific OSHA standard for lithium-ion batteries, many of the OSHA general industry standards may apply, as well as the General Duty Clause (Section 5(a)(1) of the Occupational Safety and Health Act of 1970). These include, but are not limited to the following standards:

Can lithium-ion batteries withstand a fire?

These cabinets will not withstand a fire with lithium-ion batteries beginning from within. This is an important distinction. You should ensure all storage cabinets for lithium-ion batteries are rated for fires starting from inside the cabinet. Without this, the protection is inadequate.
