

The reason why Congo does not use base station communications

Is the Democratic Republic of the Congo lagging behind in telecommunications?

Compared to the United States, the Democratic Republic of the Congo is massively lagging behind in the development of telecommunications. Under the country code +243, there were a total of 49.86 million connections in 2023. Among them were 49.80 million mobile phones, which corresponds to an average of 0.49 per person.

What telecommunications are available in the Republic of the Congo?

Telecommunications in the Republic of the Congo include radio, television, fixed and mobile telephones, and the Internet. 1 AM, 5 FM, and 1 shortwave stations (1999). One station (1999). Most citizens obtain their news from local radio or television stations as there are no nationwide radio or television stations.

Why does the Congo rely on cellular networks?

The whole country relies entirely on cellular networks because there is no wired infrastructure. The DRC is connected to an undersea optic fiber cable at the Atlantic port city Muanda. Originally, this project had been meant to improve connectivity for the people of Congo, but it has catastrophically failed.

How many people in the Congo have broadband?

Values above 100 percent mean that, on average, every inhabitant has more than one connection. The Democratic Republic of the Congo is lagging behind in the expansion of broadband internet connections. Around 31 percent of all residents have access to the internet.

Why is technology a problem in Congo?

Because people use smartphones to connect to the Internet, they are limited by poor battery performance. The lack of electricity is one of the factors that handicap and slow down the adoption of technology in Congo. Computers are still expensive for most households based on their income, which explains low ownership rates.

How fast is the Internet in the Democratic Republic of the Congo?

The Democratic Republic of the Congo is lagging behind in the expansion of broadband internet connections. Around 31 percent of all residents have access to the internet. Around 0 percent have their own fast internet connection, which is at least faster than the former ISDN (more than 256 kbit/s).
