

US inverter price details

How much does a solar inverter cost?

You can expect to spend \$0.15 to 0.24 per watt on a solar inverter, excluding installation costs. Smaller inverters for DIY systems cost less than \$500, while large inverters can cost more than \$3,000. Use a solar panel inverter size calculator to determine the right size for your system. There are three main types of solar inverters for your home.

How much does a string inverter cost?

String inverters cost \$800 to \$2,500 on average. Most homes only require a single inverter, but you could need up to three if you have a larger-than-average residential solar energy system. String inverters work by connecting several solar panels, which send their electricity to a central point where the inverter converts the power.

How much does a microinverter cost?

Microinverters cost an average of \$150 to \$300 each, but you'll need one for each solar panel in your system. They're installed on the underside of each panel and immediately convert electricity as soon as it's generated, helping increase efficiency by limiting energy loss. Microinverters are popular because they perform well in areas with shade.

When are solar module and inverter prices updated?

Solar Module Retailer Prices are updated on Monday. Solar System and Inverter Retailer Prices are updated on Friday.

How much does it cost to replace an inverter?

If the warranty for your inverter has expired, minor repairs can save cash and extend the inverter's life span. A replacement runs \$200 to \$500 plus the cost of the inverter. You'll want to replace your inverter if:

Will solar inverter prices fluctuate in 2025?

With increasing production, the global solar inverter prices are expected to be more competitive. However, supply chain disruptions and material costs may impact affordability. Factors like silicon shortages, shipping delays, and tariffs on electronic components could lead to fluctuating prices throughout 2025.
