

## Unlimited inverter 12v-60v

How much power does a 12 volt inverter need?

At 2500 Watts, the 12 Volt inverter would need over 200 Amps from the 12 volt converter. At 2500 Watts, the 12 Volt inverter would need over 200 Amps from the 12 volt converter. That would need some very fat cable. When you're dead, you don't know it, the pain is only felt by others. The same thing happens when you're stupid.

What are the disadvantages of a 12 volt inverter?

The disadvantage is that the 12 V inverter will draw 5 times the current a 60 V inverter draws for the same output power. This current needs to be supplied by the step-down converter. This will also incur additional losses in the step-down converter. I'd swap the 12 V inverter for a 60 V inverter. I had a hunch. I'll make the swap.

What makes a good inverter?

The durable aluminum housing protects the inverter from drops and bumps. [Material]: Large and durable aluminum alloy shell provides advanced anti-drop and anti-collision protection. Smart cooling fans help reduce heat and prevent shortages. Some of these items ship sooner than the others.
