

What inverter should I use for photovoltaics

Do I need a solar inverter?

Solar inverters are the operational brain of photovoltaic (PV) systems, making them one of the most important components of a solar system. Since solar panels generate power in DC, which is not useful for most home appliances, you will generally need a solar inverter.

Why are solar inverters important?

When people think about a solar energy system, solar panels are usually one of the first things that come to mind. While solar panels are undeniably important, solar inverters are an equally crucial system component--especially when it comes to creating sustainable energy solutions in homes and buildings around the world.

What are the different types of solar power inverters?

There are four main types of solar power inverters: Also known as a central inverter. Smaller solar arrays may use a standard string inverter. When they do, a string of solar panels forms a circuit where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.

Which solar inverter is best?

CNET experts have compared the most popular solar inverters' specs, warranties, prices and more. The SolarEdge Home Wave Inverter is our top pick in 2025. It was the most efficient inverter we looked at, letting you use a larger percentage of the energy your solar panels generate. This translates to less and more power to use around the house.

How do I choose the right solar inverter?

To find the right solar inverter or inverters for your installation, you must consider several specific features of your property, including your energy demand, roof complexity, and whether shading will affect your system's performance. Learn more about solar and shade.

Can I add solar panels later with a microinverter?

While it's easier to add solar panels to your system later with microinverters, choosing the right string inverter before your installation is critical, as central inverter systems are typically built-to-suit without the capacity for expanded solar generation. Use our online tool to find the right sizes for your solar energy system components.
