Do you need a sine wave inverter for solar panels?

You need a pure sine wave inverter if you plan to install solar panels on your roof or RV. Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level.

Are modified sine wave inverters better than pure sine wave?

Pure sine wave inverters cost more than modified sine wave inverters because of the sophisticated technology they use to generate cleaner electrical energy. The modified sine wave inverters will work just as fine with appliances that don't need a rectifier and that can be powered by any regular DC adapter.

How much power does a power inverter use?

Power inverters vary widely in wattage, from 300W to 3,000W and up. Some can even generate surge power as high as 6,000W. Most power inverters have two standard AC outlets for various electronic devices. Other models offer additional AC outlets and often USB ports to charge all of your devices--from laptops to fans and flood lights.

What wattage inverter do I Need?

An inverter of up to 1000W is enough for laptops and phone chargers, gaming consoles, and smaller electronics, while at 3000W you can even plug in the air conditioner or electric chainsaw. The more the wattage, the more power can the unit convert. This one is simple -- you need an inverter that's compatible with all devices you plan to use.
