What size power supply do I need for my Device?

Voltaic Systems' USB to 9V Regulator can boost any 5V USB power supply to 9 or 12 Volts for electronics that charge at a higher voltage. It has a 5.5mm x 2.5mm tip. Please confirm this tip size will fit your electronic device, or browse our adapter list for the correct size.

How to choose a portable power station?

The next step is to consider the capacity of the portable power station. The capacity of the power station will determine how long it can run your devices. Capacity is measured in watt-hours (Wh) and indicates how much electricity the portable power station can store.

What wattage does a portable power station need?

For example, if you plan to power a device that requires 1,000 watts, you'll need a portable power station with an output wattage of at least 1,000 watts. Remember: some devices may have a higher startup or surge wattage, which is the extra wattage required when the device is first turned on. AC Output: This is the standard household outlet type.

What type of outlet does a power station have?

AC Output: This is the standard household outlet type. Most power stations have at least one AC outlet. DC Output: Often used for car accessories or specific devices. USB Ports: For charging phones, tablets, and other small devices. USB-C Ports: Increasingly common for faster charging of compatible devices.

What should you consider when buying a power station?

Aside from the capacity and output wattage, you'll also need to consider portability and other features of the power station. Some power stations are designed to be lightweight and portable, making them easy to carry around. Others may have additional features such as built-in AC outlets, USB ports, and even solar panels.
